

The TM100 is a high quality measuring apparatus, used to measure both height and circumference at the same time. It is simply to be fixed on the wall, and the exact measured height can be read off at the measuring slide. The roller tape is mounted in a special enclosure while the tape-end can be locked into the enclosure. This features ensures you an easy single-hand-operation while using the automatic roll-up button. The roller-tape is printed on both sides. ■
